Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11 drawn to an electrostatic actuator classified in class 310, subclass 309.
 - II. Claims 12-17, drawn to a method of driving an actuator classified in class 318, subclass 116.
 - II. Claims 18-20, drawn to a method of driving an actuator classified in class 29, subclass 596.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention actuator of Group I has separate utility such as an actuator which is not driven by altering the voltages on the stator, and the method of Group II can be used with other actuators other than protruding electrodes or without bumpers. See MPEP § 806.05(d).

Inventions Group I and Group III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process can be used to make other materially different products such as actuators without protruding electrodes or plate electrodes.

Inventions Group III and Group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention method of using the actuator of Group III has separate utility such as a making an actuator which is not driven by altering the voltages on the stator or where the moving is over the stator, and the method of driving the actuator of Group II can be used with other methods of making such as actuators without a bumper, such as where contact is prevented by levitation. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karl I.E. Tamai whose telephone number is (703) 305-7066.
